# Agenda

- Intro
- Dapr Basics
  - BB: Service Invocation
  - BB: Pub/Sub
  - BB: State Management
  - BB: Virtual Actors
  - BB: Secret Management
  - BB: Observability
  - BB: Resiliency
- Conclusion

A close-up, low-angle shot of several rowers in a boat, wearing blue and red uniforms, pulling their oars. The oars are black with yellow handles and are connected to a complex mechanical system. The background is a bright, slightly blurred body of water.

Dapr

# Intro

4tecture<sup>®</sup>  
empower your software solutions

# Cloud computing characteristics by NIST

- On-demand self-service
- Broad network access
- Resource pooling
- Rapid elasticity
- Measured service

# CNCF cloud native definition

Cloud native technologies empower organizations to build and run scalable applications in modern, dynamic environments such as public, private, and hybrid clouds. Containers, service meshes, microservices, immutable infrastructure, and declarative APIs exemplify this approach.

These techniques enable loosely coupled systems that are resilient, manageable, and observable. Combined with robust automation, they allow engineers to make high-impact changes frequently and predictably with minimal toil.

The Cloud Native Computing Foundation seeks to drive adoption of this paradigm by fostering and sustaining an ecosystem of open source, vendor-neutral projects. We democratize state-of-the-art patterns to make these innovations accessible for everyone.

# Cloud native applications

Cloud-native applications should be designed and implemented to use and take advantage of the cloud computing characteristics.

# Cloud native applications characteristics

- Immutable Packaging & Execution
- Decoupled Configurations and Secrets
- Statelessness and Statefulness
- Modular Applications / Microservices
- Polyglot Paradigm (multi lang / tech)
- Centralized Logging and Monitoring
- DevOps and SRE processes
- Automation
- API-Centric

# Commonly used with cloud native apps

- Microservices
- Cloud platforms
- Containers
- Kubernetes
- Immutable infrastructures
- Declarative APIs
- Continuous Delivery technologies

# Challenges with Distributed Apps

- Lots of components / services
- Service-to-service communication
- Decoupling by using events
- Handling state across multiple instances
- Stateful services / actors
- Local dev environment vs. cloud environment

# dapr.io

Portable, event-driven runtime

Build connected distributed applications faster

APIs for solving distributed application challenges

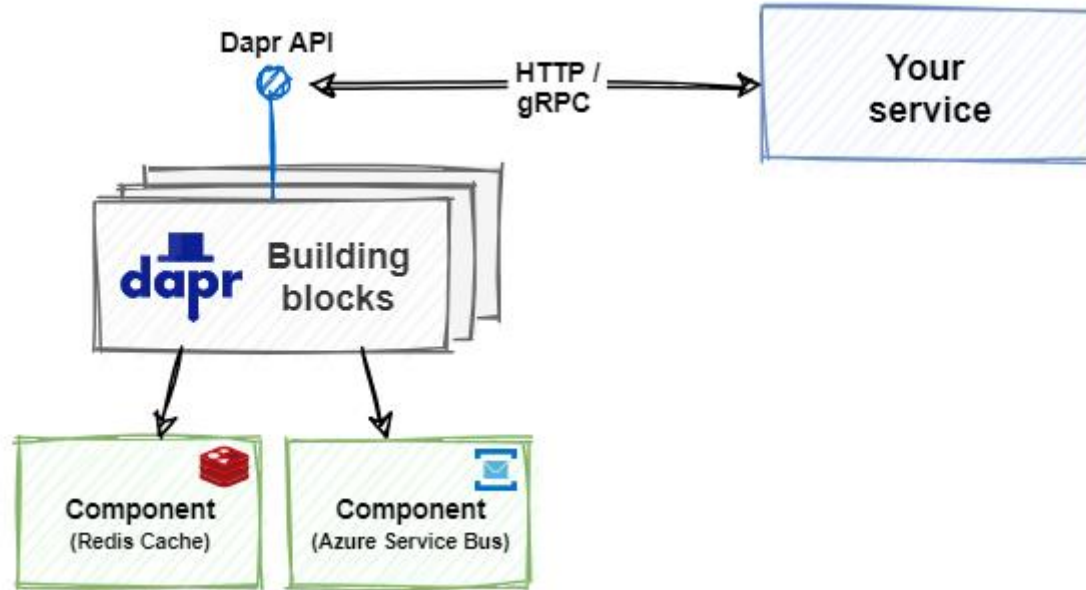

Cloud and Edge

# Dapr Building Blocks

# Dapr Building Blocks Abstraction

# Dapr Sidecar Architecture

# Dapr Basics

4tecture<sup>®</sup>  
empower your software solutions

# Dapr

- [dapr.io](https://dapr.io)
- Open source
- Originated at Microsoft
- Cloud Native Computing Foundation (CNCF) – incubating maturity level

# Dapr – High Level Definition

- Any language or framework
- Portable APIs
- Building blocks applying best practices
  - Use the blocks you need
  - No big bang framework
- Platform agnostic
- Extensible and pluggable components

# Dapr Building Blocks Overview

# Single API - Multiple Components

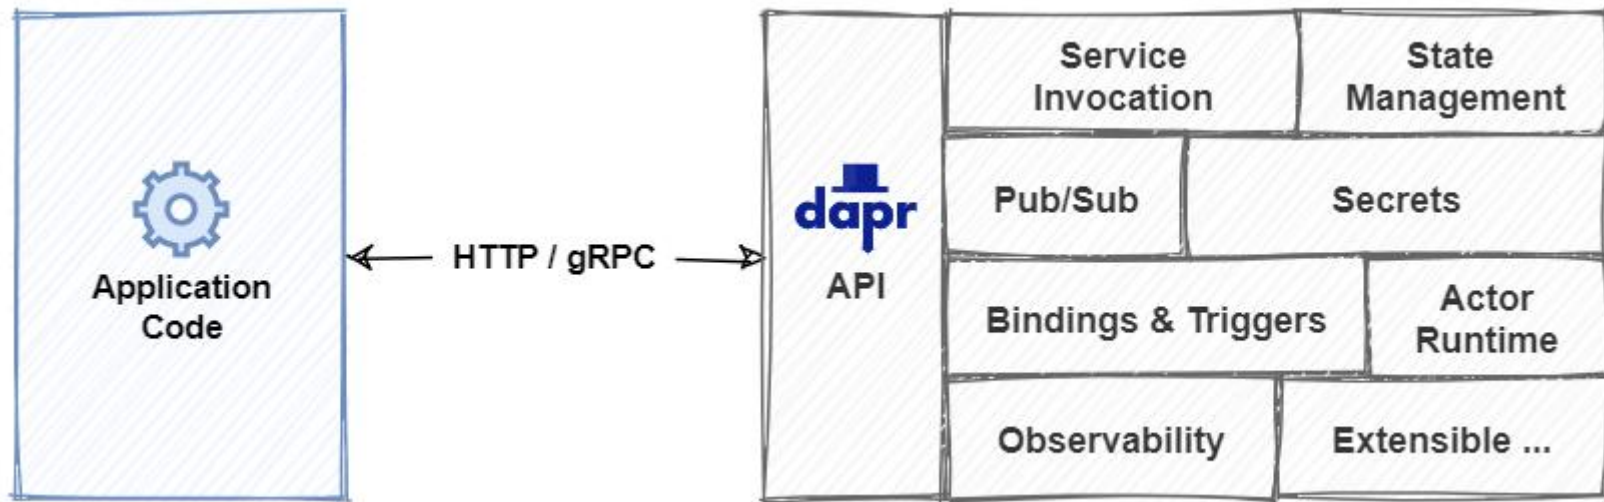

```
var weatherForecast =  
await daprClient.GetStateAsync<WeatherForecast>("statestore", "AMS");  
  
daprClient.SaveStateAsync("statestore", "AMS", weatherForecast);
```

- AWS DynamoDB
- Aerospike
- Azure Blob Storage
- Azure CosmosDB
- Azure Table Storage
- Cassandra
- Cloud Firestore (Datastore mode)
- CloudState
- Couchbase
- Etcd
- HashiCorp Consul
- Hazelcast
- Memcached
- MongoDB
- PostgreSQL
- Redis
- RethinkDB
- SQL Server
- Zookeeper

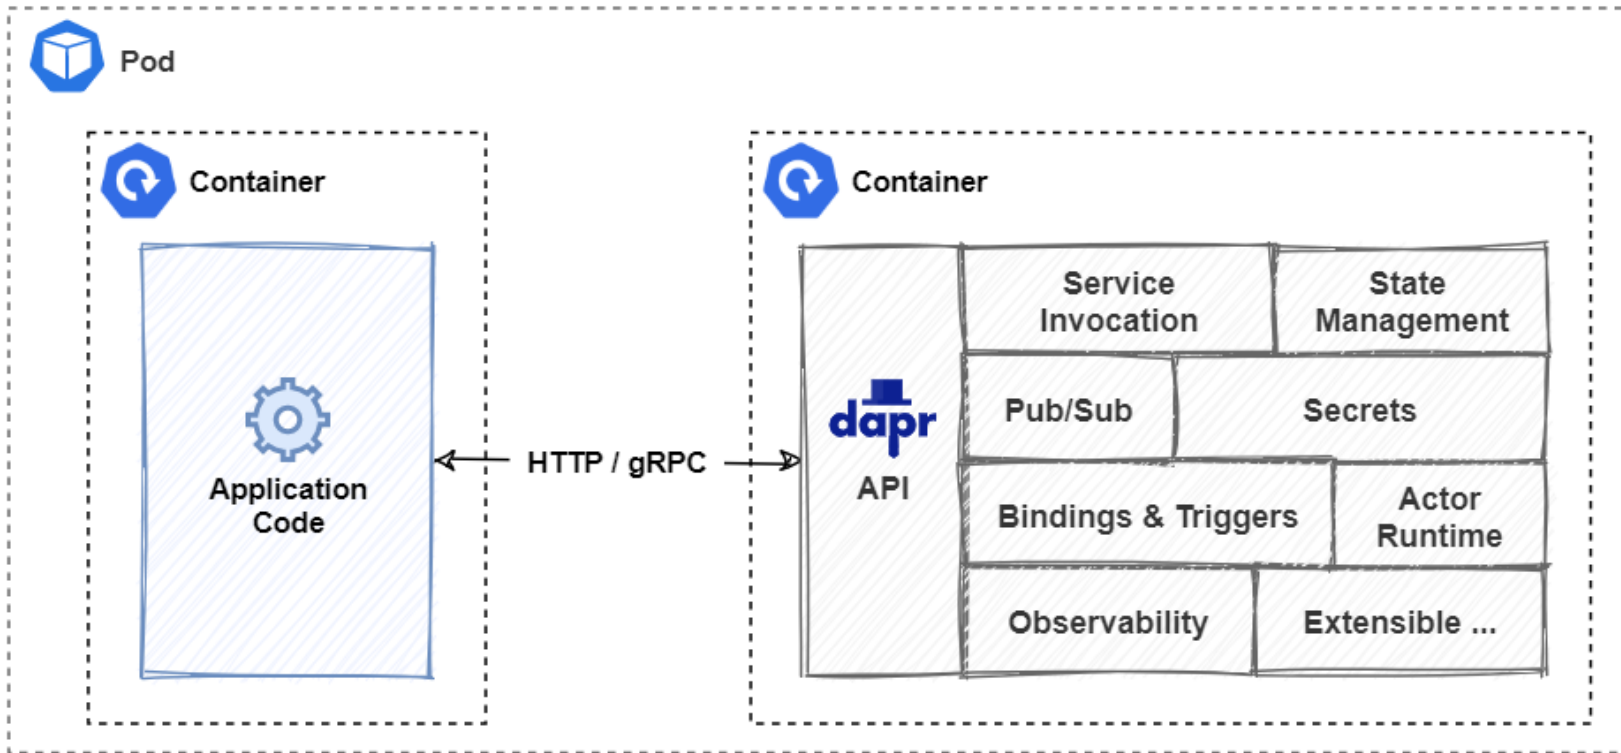

The Dapr sidecar provides built-in  
**security**, **resiliency** and **observability**  
capabilities.

Speeds up application development by providing an integrated set of APIs for communication, state, and workflow.

# Self-hosted Sidecar

# Kubernetes-hosted Sidecar

# Sidecar Performance Considerations

- Dapr operation:  
≥ 1 out-of-process network call
- Heavily optimized sidecar implementation
- gRPC with multiplexing, bidirectional full-duplex, streaming
- Overhead should be sub-millisecond

# SDK Overview

Language	Status	Client	Server extensions	Actor	Workflow
.NET	Stable	✓	ASP.NET Core	✓	✓
Python	Stable	✓	gRPC FastAPI Flask	✓	✓
Java	Stable	✓	Spring Boot Quarkus	✓	✓
Go	Stable	✓	✓	✓	✓
PHP	Stable	✓	✓	✓	
Javascript	Stable	✓		✓	✓
C++	In development	✓			
Rust	In development	✓		✓	

# Runtimes

## Self-Hosted

- Dedicated process next to your application process
- Executable or Docker Image

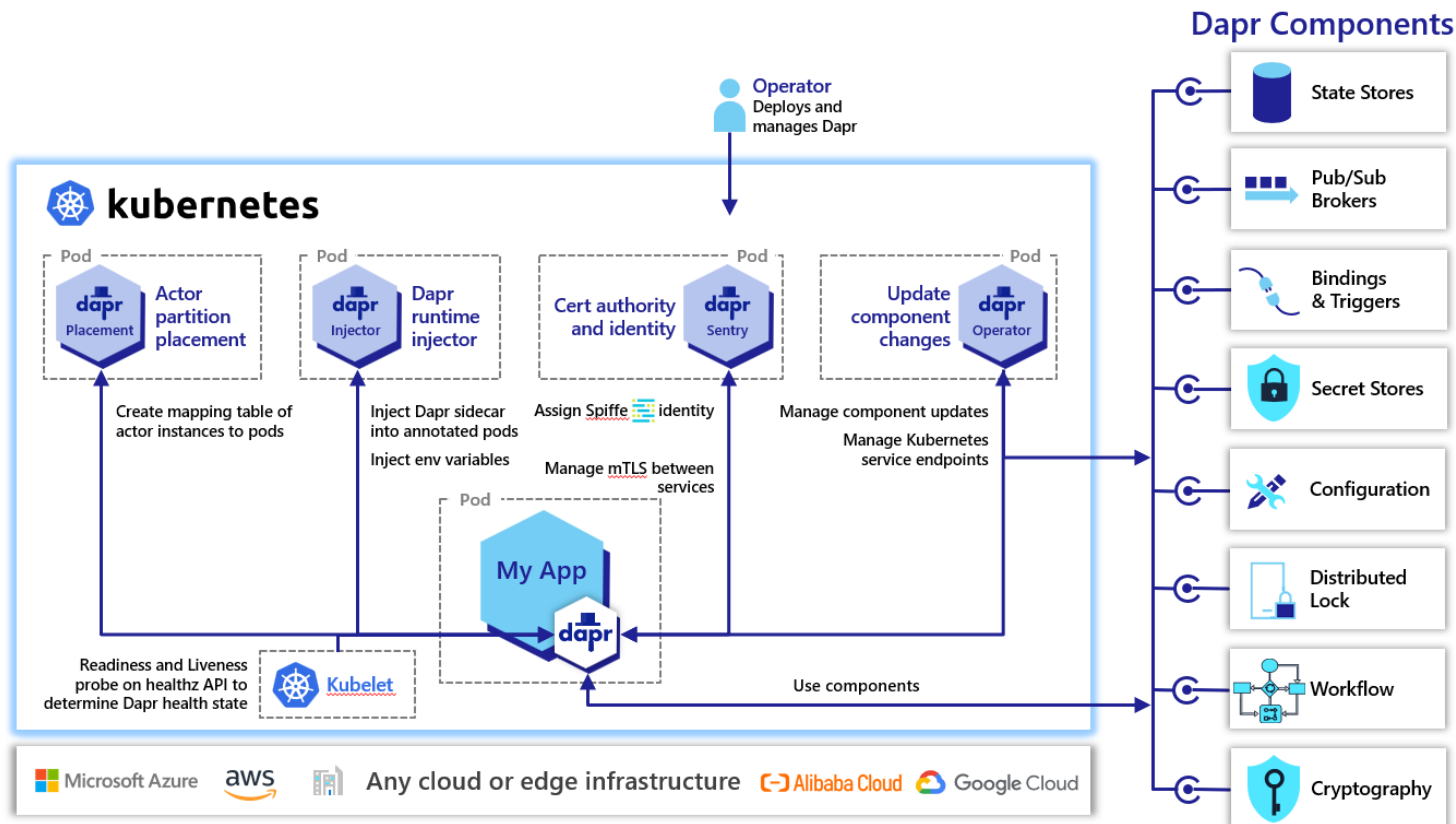

## Kubernetes

- Sidecar container in your pod, uses localhost interface
- Usually injected based on attributes

## Serverless

- Integrated in Azure
- i.e. Container Apps

# Dapr in Kubernetes

# Dapr components

A close-up, low-angle shot of several rowers in a boat, wearing blue and red uniforms, pulling their oars. The oars are black with yellow and blue handles. The background is a bright, slightly blurred body of water.

# Demo first

4tecture<sup>®</sup>  
empower your software solutions

# Fast Food Company

A person is seen from the side, sitting at a desk in a dark room. They are looking at two computer monitors. The left monitor displays a web application with a sidebar and a main content area. The right monitor displays a code editor with syntax-highlighted code. A red Coca-Cola can is on the desk between the monitors. The person's hands are on a keyboard. The word "DEMO" is overlaid in large white letters on the left side of the image.

# DEMO

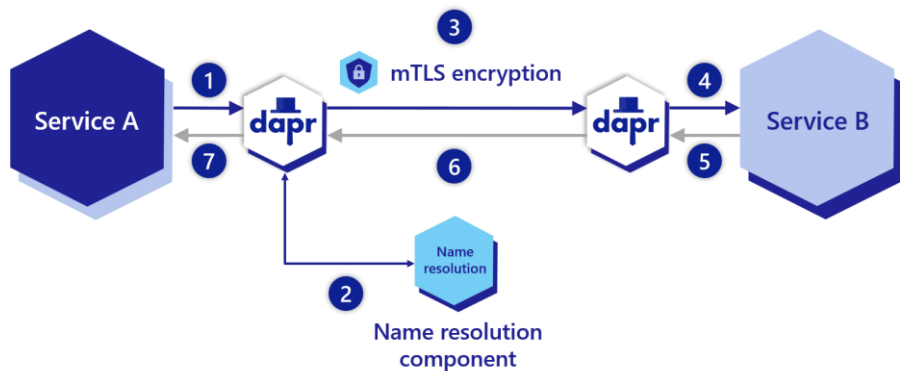

A background image showing a rowing team in a boat. The rowers are wearing blue and red uniforms and are captured in a synchronized rowing motion. The focus is on the oars and the rowers' hands, with the water visible in the foreground.

Dapr Building Blocks

# Service Invocation and Configuration

4tecture<sup>®</sup>  
empower your software solutions

# Service Invocation

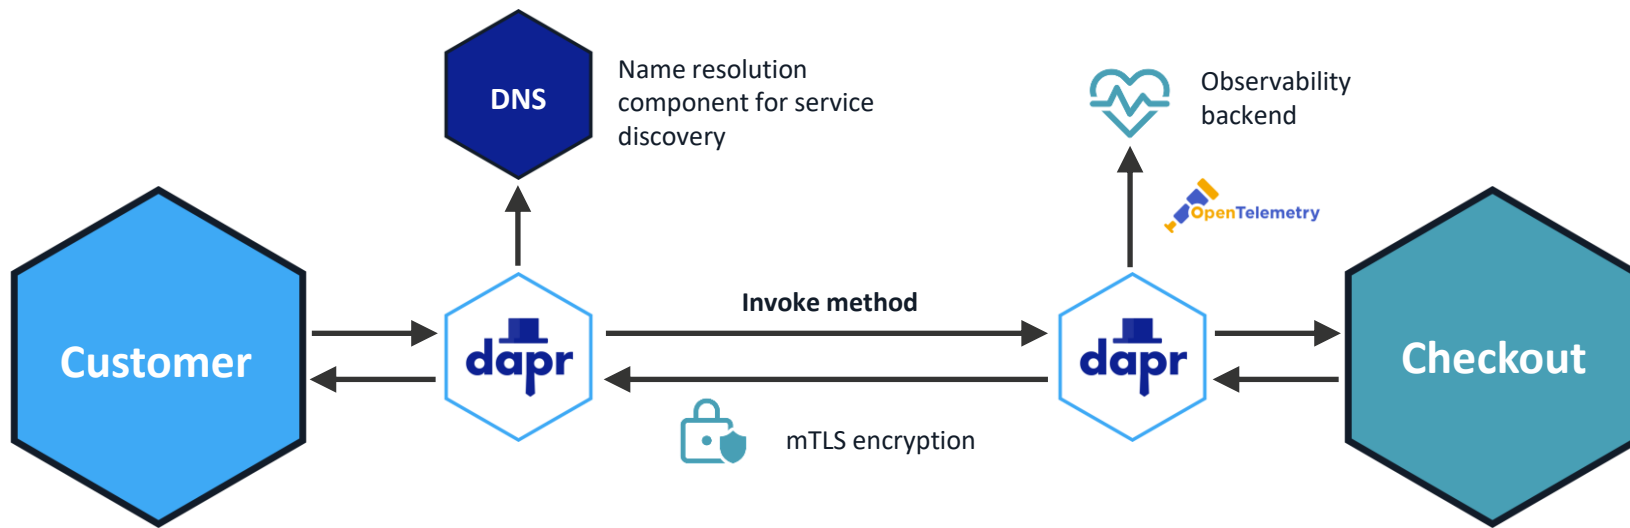

- HTTP and gRPC
- mTLS (with Dapr Sentry)
- Resiliency including retries
- Tracing and metrics with observability
- Access control (policies)
- Namespace scoping
- Load balancing (round robin with mDNS)
- Pluggable service discovery

# Service Invocation

Service  
Invocation

**POST**

<http://localhost:5100/order>

# DEMO

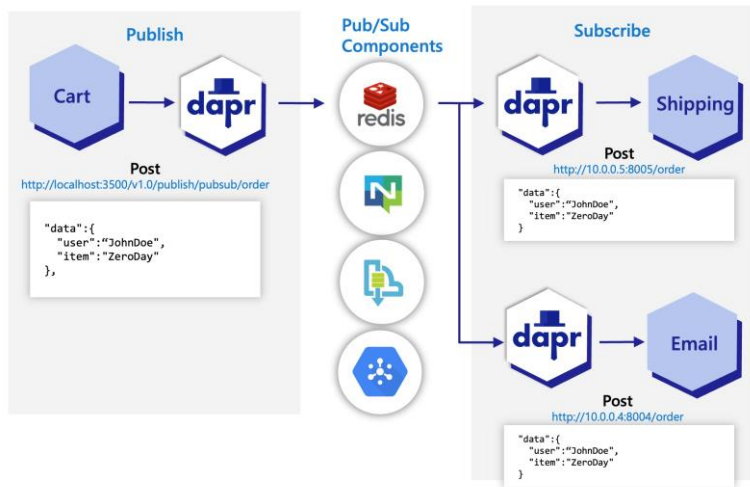

A close-up, low-angle shot of rowers in a boat, showing their legs and hands gripping oars. The rowers are wearing blue long-sleeved shirts and red and white patterned shorts. The oars are black with yellow and blue handles. The background is a bright, slightly blurred body of water.

Dapr Building Blocks

**Publish & Subscribe**

4tecture<sup>®</sup>  
empower your software solutions

# Publish & Subscribe

- Platform-agnostic API to send and receive messages
- At-least-once message delivery guarantee
- Integration with various message brokers
- CloudEvents 1.0 specification
- Message content type
- Content-based Routing
- Dead letter topics
- Namespace consumer groups
- Scoping topics

# Competing consumers pattern

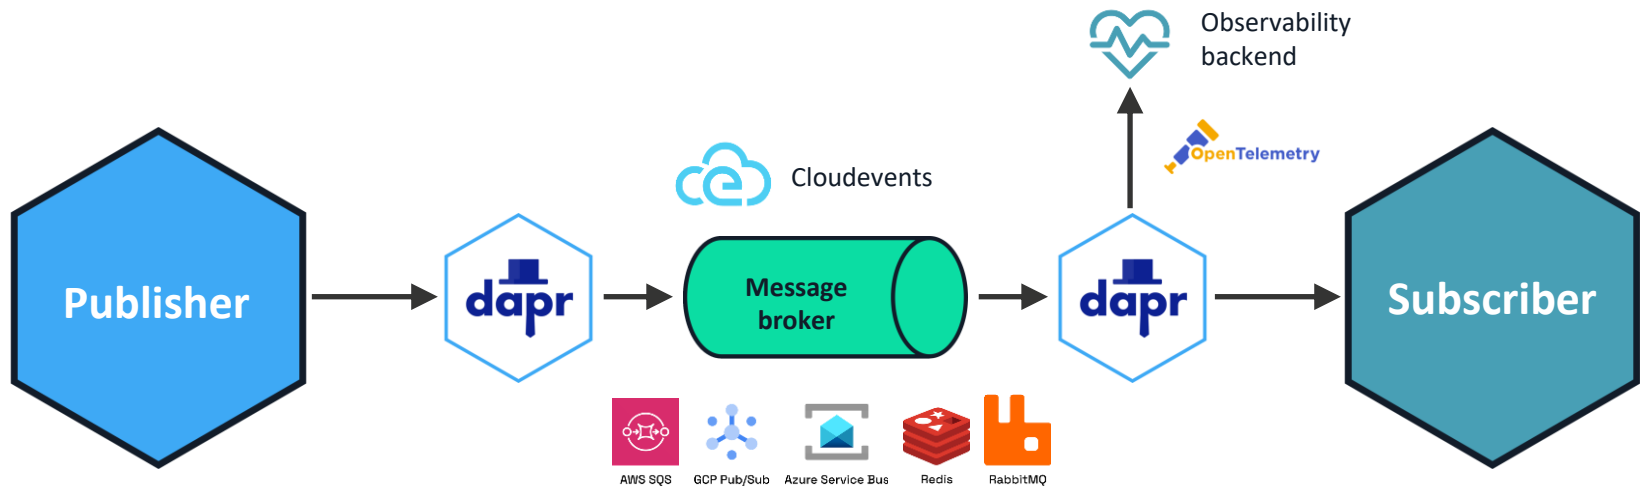

- Multiple application instances using a single consumer group
- Same app id = same consumer group
- Dapr delivers each message to only one instance of that application

# Publish / Subscribe

Publish /  
Subscribe

**POST**

# State Management

4tecture<sup>®</sup>  
empower your software solutions

# State Management

- Configurable state store behavior (default eventually consistent, last-write-wins concurrency pattern)
- Optimistic concurrency with ETag
- Time to live (TTL)
- State encryption
- Querying state

# State Stores

A person is seen from the side, sitting at a desk in a dark room. They are looking at two computer monitors. The left monitor displays a web application with a sidebar and a main content area. The right monitor displays a code editor with syntax-highlighted code. A red Coca-Cola can is on the desk between the monitors. The person's hands are on a keyboard. The word "DEMO" is overlaid in large white letters on the left side of the image.

# DEMO

A close-up, low-angle shot of rowers in a boat, showing their legs and hands gripping the oars. The rowers are wearing blue and red athletic gear. The oars are black with yellow and blue handles. The background is a bright, slightly blurred body of water.

Dapr Building Blocks

# Virtual Actors

4tecture<sup>®</sup>  
empower your software solutions

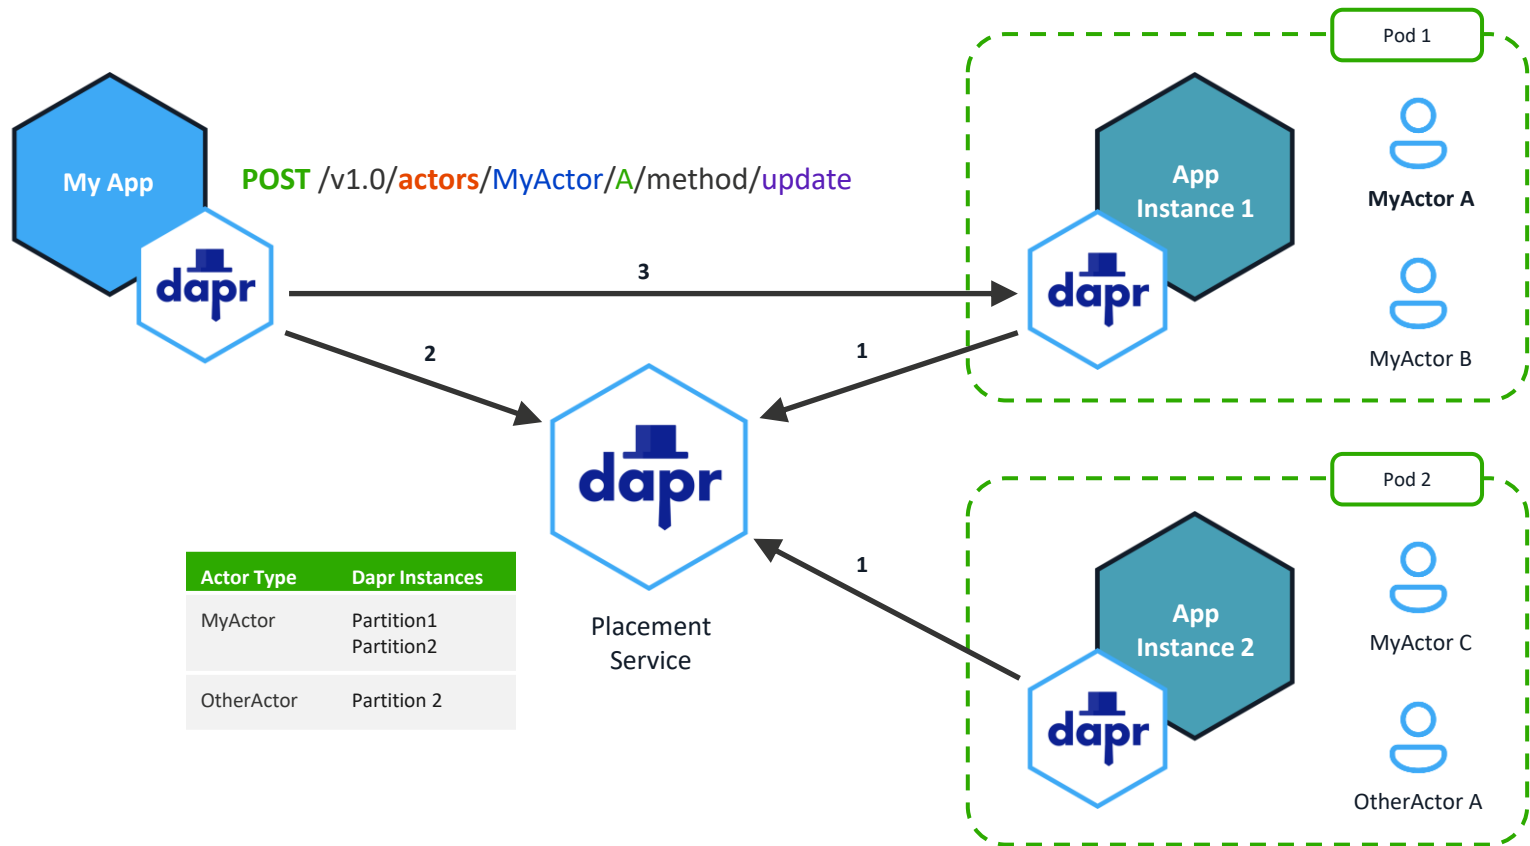

# Actors

- Virtual Actor pattern
- Stateful, long running objects with identity
- Encapsulate state and behavior within a distributed system
- Actor state store
- Actor timers and reminders

# Actor placement

A person is seen from the side, sitting at a desk in a dark room. They are looking at two computer monitors. The left monitor displays a web application with a sidebar and a main content area. The right monitor displays a code editor with syntax-highlighted code. A red Coca-Cola can is on the desk between the monitors. The person's hands are on a keyboard. The word "DEMO" is overlaid in large white letters on the left side of the image.

# DEMO

A background image showing a rowing team in a boat. The rowers are wearing blue and red uniforms and are pulling oars with yellow handles. The boat is on water, and the background is slightly blurred.

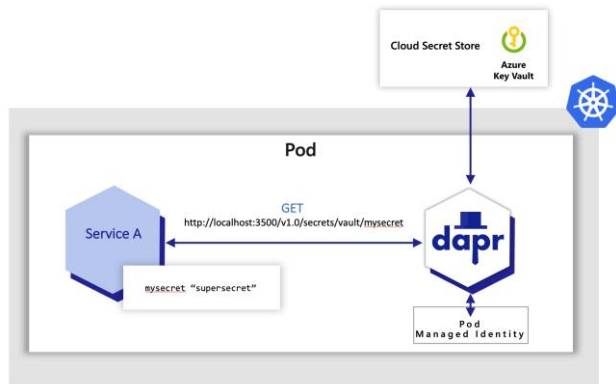

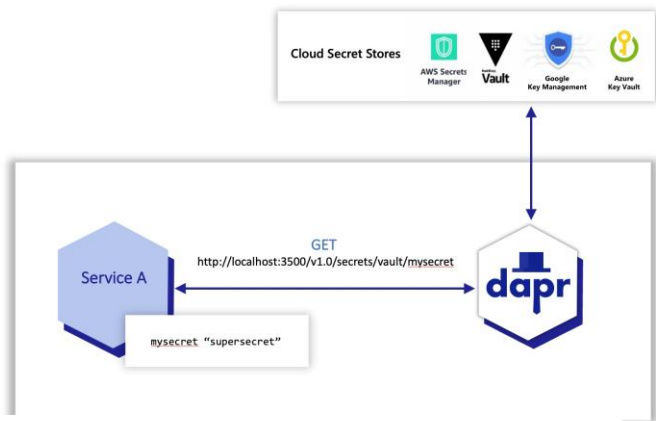

Dapr Building Blocks

# Secret Management

4tecture<sup>®</sup>  
empower your software solutions

# Secret Management

- Access secret stores through generic Dapr API
- Secret scoping (limit access)

# DEMO

A background image showing a rowing team in a boat. The rowers are wearing blue and red uniforms and are holding oars with yellow handles. The boat is on water, and the background is slightly blurred.

Dapr Building Blocks

# Input/Output Bindings

# Input/Output Binding

- Trigger your app with events coming from external systems
- Handle retries and failure recovery
- Portable app with environment-specific bindings

# Bindings

A close-up, low-angle shot of rowers in a boat, focusing on their hands and the oars. The rowers are wearing blue long-sleeved shirts and red and white patterned shorts. The oars are black with yellow and blue handles. The background is a bright, slightly blurred body of water.

Dapr Building Blocks

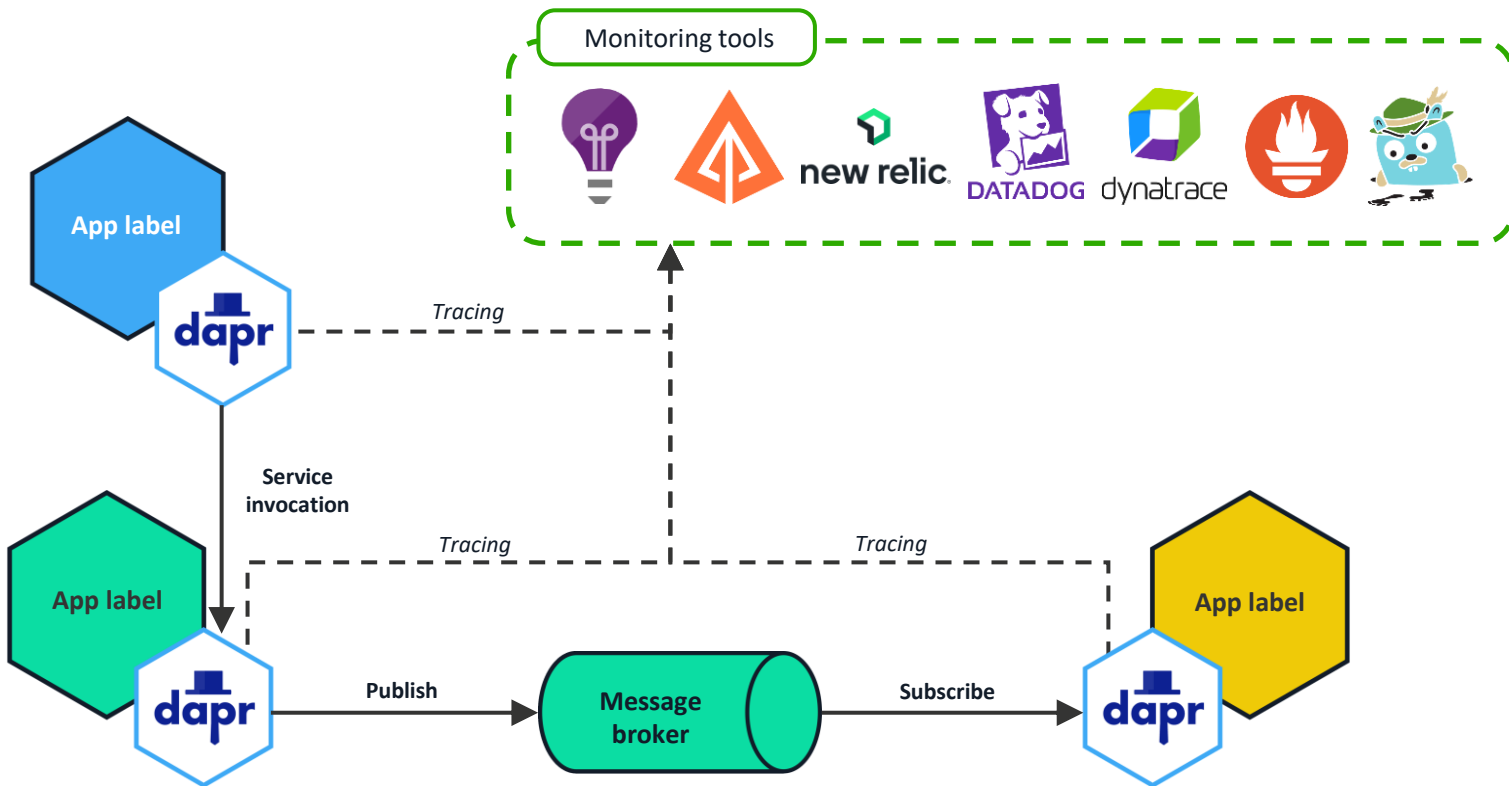

# Observability

4tecture<sup>®</sup>  
empower your software solutions

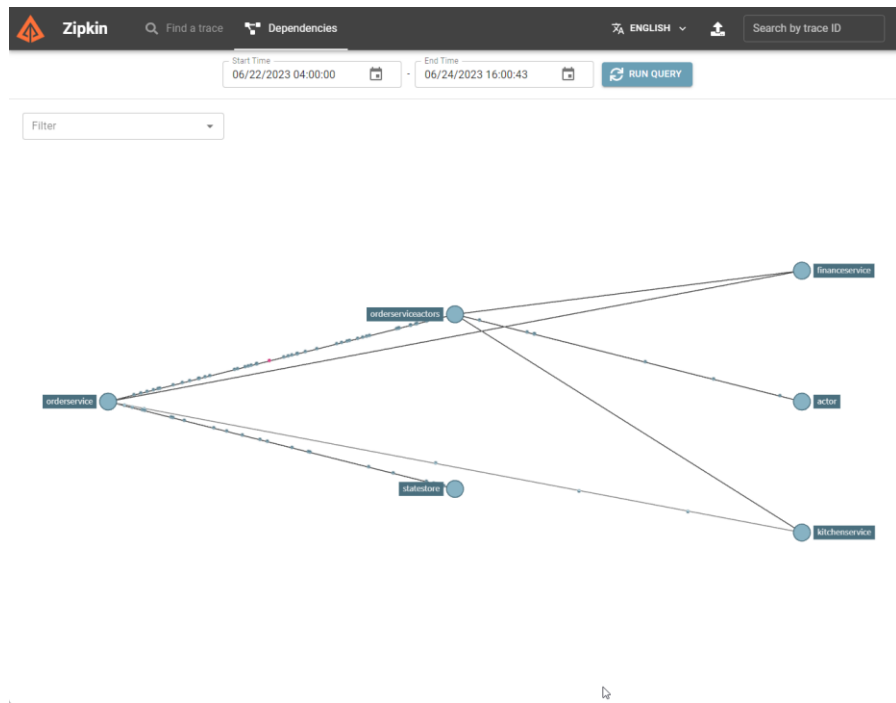

# Distributed tracing

Observability

# Observability

- Distributed tracing
- Open Telemetry (OTEL) and Zipkin protocols
- Used with service invocation and pub/sub APIs
- Sidecar health
- App health checks
  - Unsubscribing Pub/Sub
  - Stop input bindings
  - Short-circuiting all service-invocation requests

A close-up, low-angle shot of several rowers in a boat, wearing blue and red uniforms, pulling their oars. The oars are black with yellow and blue handles. The background is a bright, slightly blurred body of water.

Dapr Building Blocks

# Resiliency

4tecture<sup>®</sup>  
empower your software solutions

# Resiliency

Resiliency patterns can be applied across Dapr APIs:

- Retries
- Timeouts
- Circuit breakers

Declarative and decoupled from application code.

Available across all component types, service invocation, and actors.

```
apiVersion: dapr.io/v1alpha1
```

```
kind: Resiliency
```

```
metadata:
```

```
  name: myresiliency
```

A person is seen from the side, sitting at a desk in a dark room, illuminated by the blue light of two computer monitors. The person is typing on a keyboard. The left monitor displays a web application with a sidebar and a main content area. The right monitor displays a code editor with syntax-highlighted code. A red Coca-Cola can is on the desk between the monitors. A mouse and a pen holder are also visible on the desk.

# DEMO

A background image showing a rowing team in a boat. The rowers are wearing blue and red uniforms and are captured in a synchronized rowing motion. The focus is on the oars and the rowers' hands, with the water visible in the background.

.NET Microservices with Dapr

# Conclusion

# Pros / Cons

## Advantages

- Develop faster
- Best practices
- Portability
- Focus on your logic

## Disadvantages

- Additional hop / network overhead
- Common API – less features

# Conclusion

- Suitable for most teams and applications
- Base your development on proven best practices
- Ideal, if portability is key (different environments / clouds, local, etc.)

A background image showing a rowing team in blue and red uniforms, pulling oars with yellow handles. The oars are in a synchronized position, and the water is visible in the foreground.

.NET Microservices with Dapr

Q & A

4tecture<sup>®</sup>  
empower your software solutions

# Thank you for your attention!

If you have any questions do not hesitate to contact us:
